

समाधान · Samadhan

A solution begins the moment someone is heard.

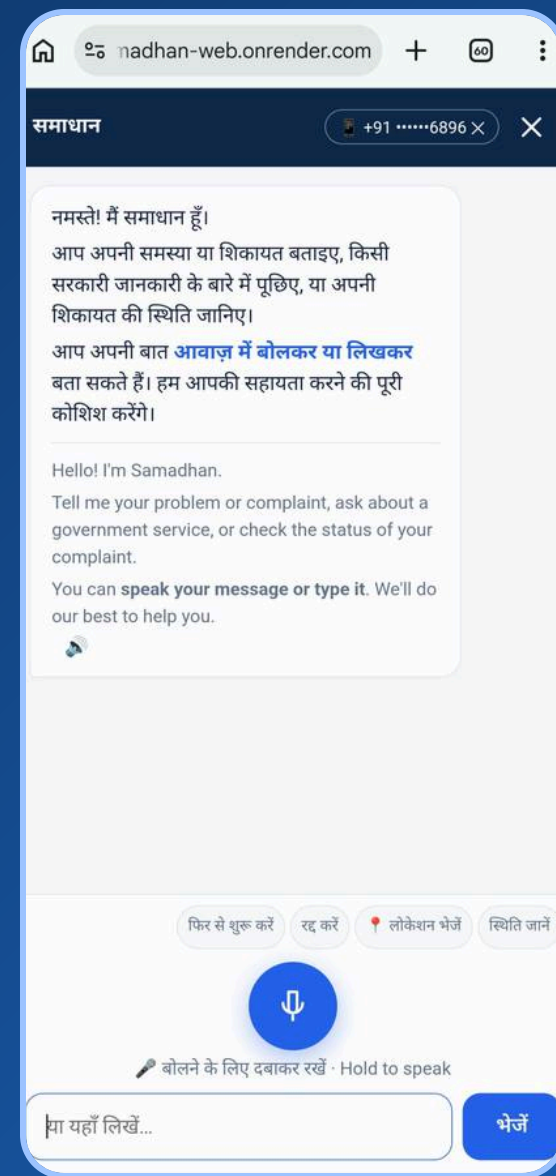

Speak in your own words, in Hindi, Hinglish or your dialect. Samadhan sends your complaint to the right department, anywhere in Madhya Pradesh.

Team Samadhan

Live: samadhan-web.onrender.com

Code: github.com/krishnakantnagina/Samadhan

THE PROBLEM

Many people cannot be heard

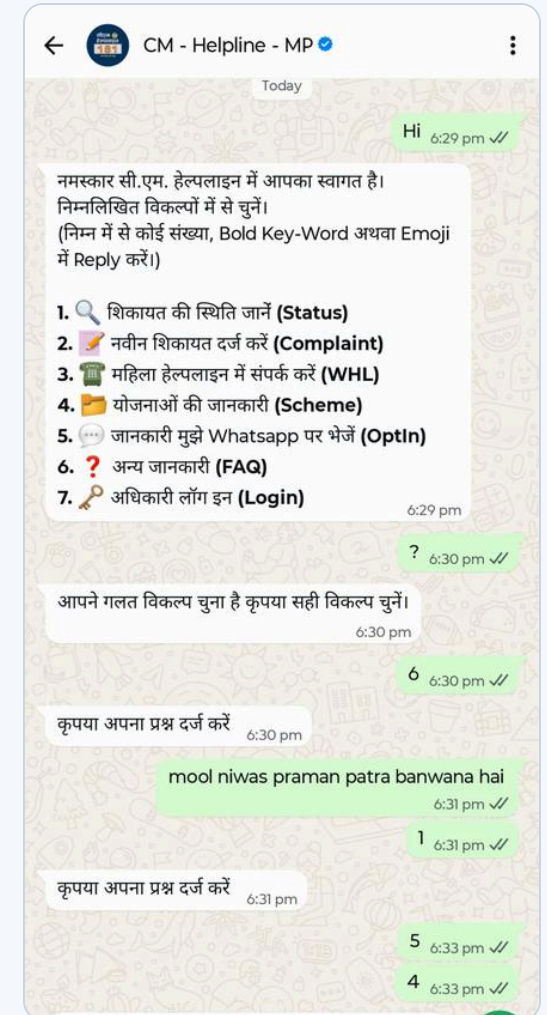

- A citizen has a real problem but cannot **write it down** or explain it to the right office.
- They must know the **department**, the **ward or zone** and how to fill a form.
- Many speak Hindi, Hinglish or a **local dialect**, not the language of menus and forms.
- So the complaint is lost, or reaches the **wrong desk**, and days go by.

The scale is already huge

CM Helpline 181 alone has registered over **4 crore** complaints (public figure from cmhelpline.mp.gov.in, 1 Oct 2026). Every wrong desk costs a citizen time.

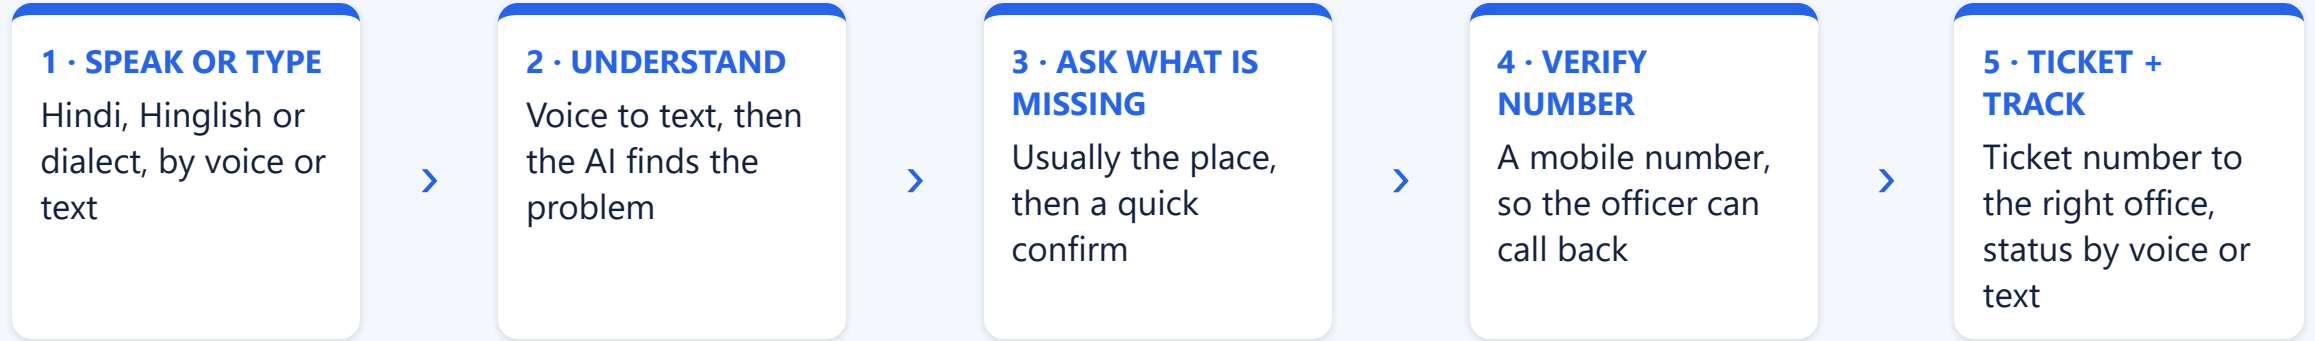

What we saw

The CM Helpline WhatsApp bot is a numbered menu of 7 options. Our Hinglish question got no answer, and it asked for the question again.

OUR SOLUTION

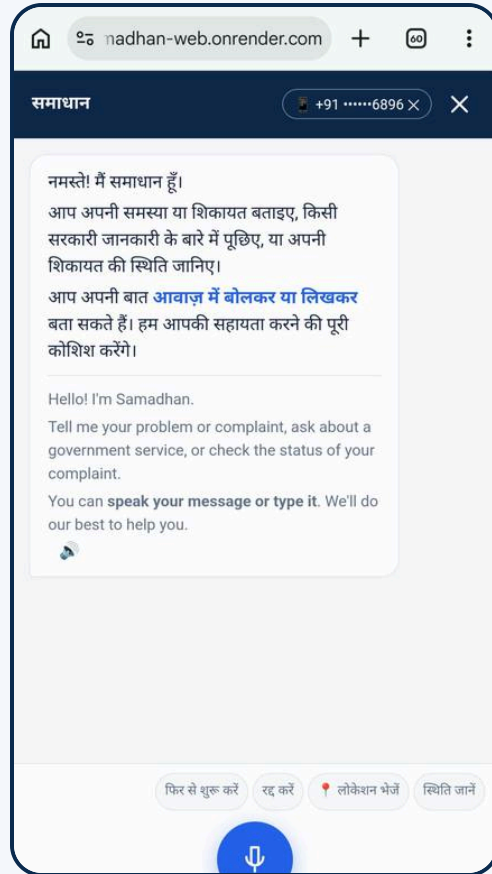

Just speak. We do the rest.

- No forms, and no need to know which office to go to.
- A **spoken reply** in the citizen's own language.
- Giving a mobile number before filing **discourages false complaints** and lets the officer call the citizen back.
- Officers get a ready, classified ticket on a **central dashboard**.

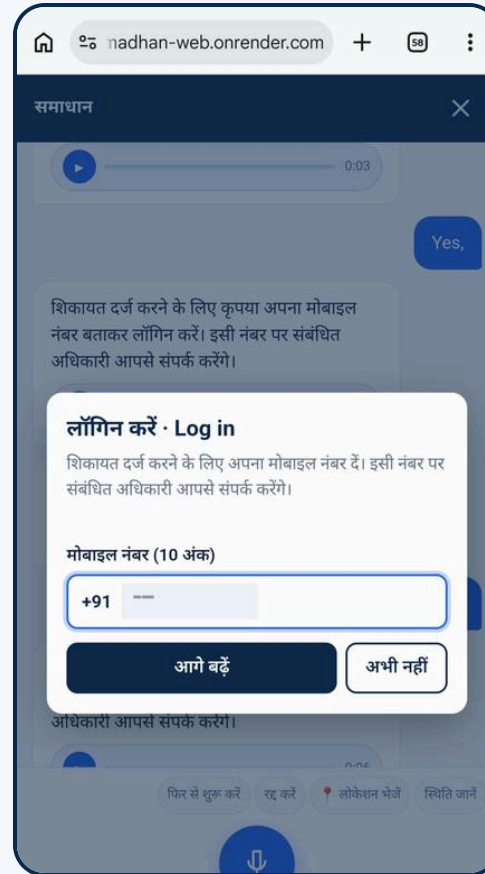

SEE IT WORK

From a spoken problem to a ticket, on a phone

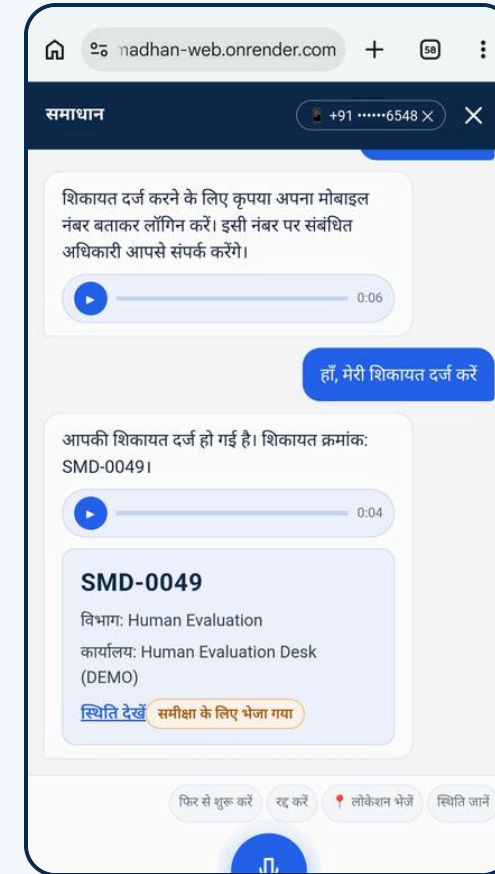

1 · Speak or type

Greeting, voice, location, status

2 · Verify the number

So officers can call back

3 · Ticket registered

SMD-0049, department, office

HOW IT WORKS

An AI that stays inside a boundary

VOICE IN

Sarvam speech recognition (Groq Whisper as backup)

UNDERSTAND

LLM and our engine read the problem

CLASSIFY

Jev picks the department

CHECK

Plain code validates every value

VOICE OUT

Sarvam text-to-speech reply

The AI has a boundary

The model proposes. Plain code checks each value against a service specification, so it **cannot invent** a department, field or office.

Safe when unsure

Unclear cases go to a **Human Evaluation** desk or a review queue. Every officer correction is logged.

Built to be reliable

Three Groq models then Gemini as fallback, short timeouts, Hindi error messages, no duplicate tickets.

Python · FastAPI · Supabase (Postgres + private audio storage) · HTML/JS website · Streamlit dashboard · Render

Built for how Madhya Pradesh speaks

Voice first, dialect friendly

Press-and-hold voice like a messaging app, Hindi-first, spoken replies. Even complaint numbers are understood when said aloud.

Understand to route

We do not need perfect transcription of every dialect. We need to understand the complaint well enough to **route it correctly**.

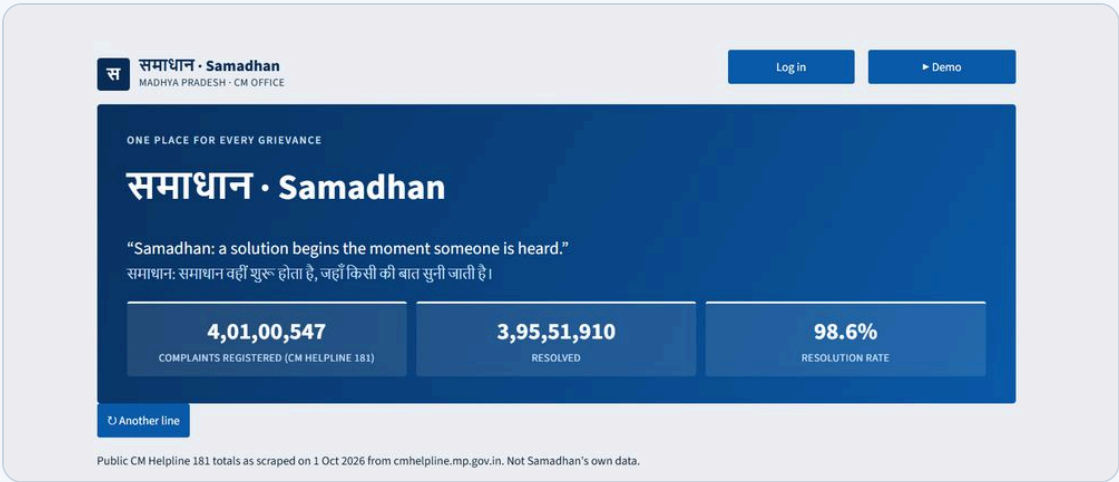

A new department is a file

Adding a service is one specification file plus office rows. No engine rewrite, so it can grow across the whole state.

Data MP does not have yet

Each conversation is stored in an organised way: voice, words, department and officer corrections. With the government as the legal authority, it can help train future language models for citizens.

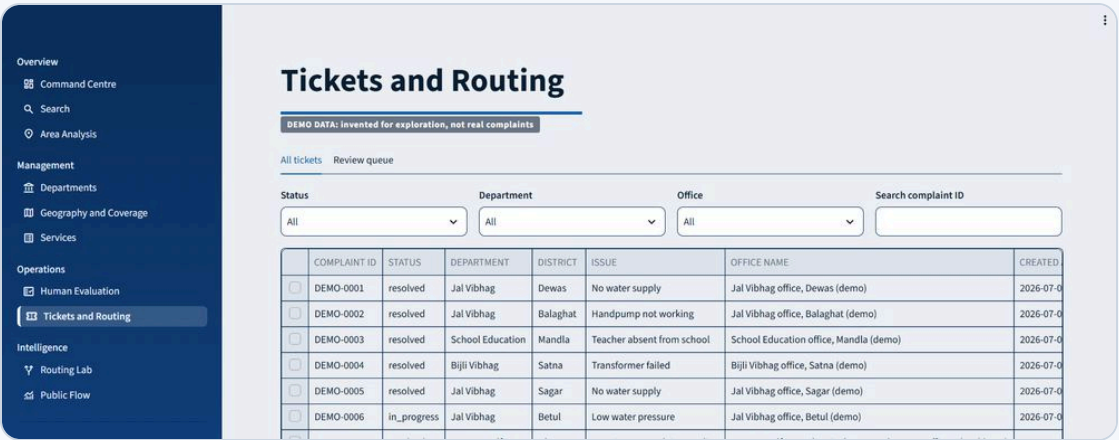

One central dashboard for the CM office

Home: public CM Helpline 181 totals, labelled as not Samadhan's own data

- Tickets arrive classified, with a summary and the original audio, plus a review queue, reassignment and a map.

Dashboard: samadhan-dashboard.onrender.com (tap Demo for sample data)

Tickets and routing: filters, review queue (invented demo data, labelled)

It works today, and we say what is not done

~90%

exact routing on 60 test messages

450

automated tests pass (415 backend + 35 dashboard)

Live

website, backend and dashboard are hosted

Impact we aim for

- Correct routing the first time
- Less triage work for officers
- A voice for people who cannot write

Our honest limits

- Office data is mostly DEMO. Ward matching by GPS is not built yet.
- Dialect test data is synthetic.
- Mobile login uses a demo PIN until we get the SMS licence.

From one pilot to every district of Madhya Pradesh

NOW

Website, voice, routing, tickets, mobile login, central dashboard

NEXT

Verified office data, real SMS OTP once the licence is obtained, rate limits

THEN

WhatsApp and phone calls on the same engine, so people without a smartphone can use it

LATER

More departments and districts, officer accounts, hand-off to MPOnline channels

Calls and messages can be kept, with the right consent and rules, to build the dialect data MP needs.

Samadhan complements MPOnline's existing platform as a self-service channel. It does not replace it.

WHY WE DESERVE TO ADVANCE

A citizen who is heard trusts the system

A citizen who is heard trusts the system. A system that is trusted attracts business. And business builds the future of Madhya Pradesh.

We are a small team with very few resources, but we want to build something that truly matters, even if it is hard. Please give us the chance to advance, and with the jury's guidance, we will make Samadhan better.
