

MPONLINE IDEA & INNOVATION HACKATHON 2026

PROBLEM STATEMENT 5 · AI FOR PUBLIC SERVICES & CITIZEN-CENTRIC GOVERNANCE

समाधान • Samadhan

Every voice will be heard.

The problem we solve: people who cannot write down or explain their complaint go unheard, and their complaint is lost or reaches the wrong desk.

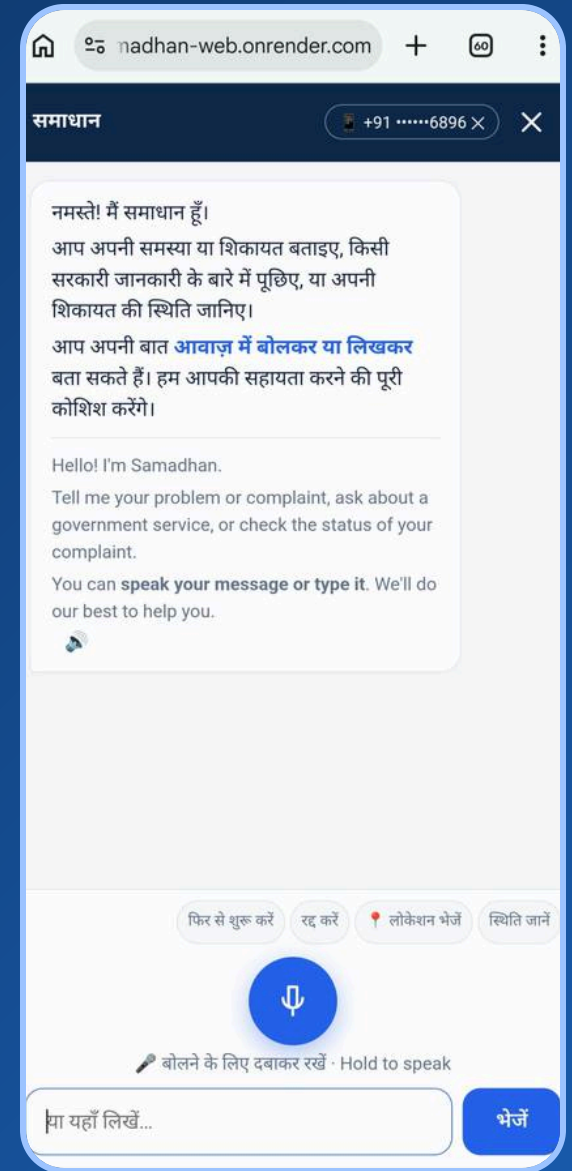

Team Samadhan

Krishnakant Nagina · Team Lead · Oriental College of Technology

Anshul Kirar · Dev, UI/UX · Oriental College of Technology

Ayush Patidar · Dev, Backend · Oriental College of Technology

Priyanshu Nagina · Dev, AI/LLM · Mittal Group of Institutes

THE PROBLEM

Many people cannot be heard

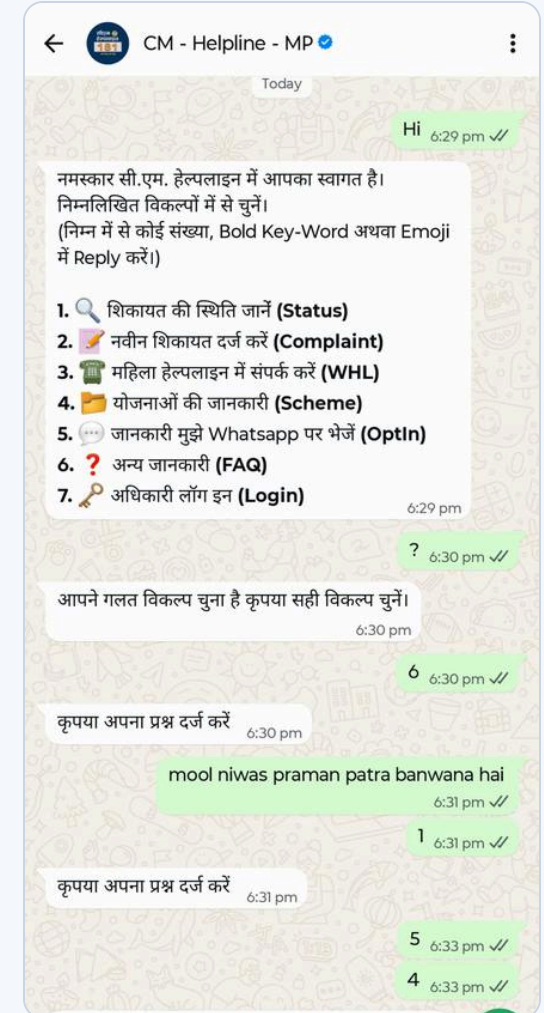

- A citizen has a real problem but cannot **write it down** or explain it to the right office.
- They must know the **department**, the **ward or zone** and how to fill a form.
- Many speak Hindi, Hinglish or a **local dialect**, not the language of menus and forms.
- So the complaint is lost, or reaches the **wrong desk**, and days go by.

The scale is already huge

CM Helpline 181 alone has registered over **4 crore** complaints (public figure from cmhelpline.mp.gov.in, 1 Oct 2026). Every wrong desk costs a citizen time.

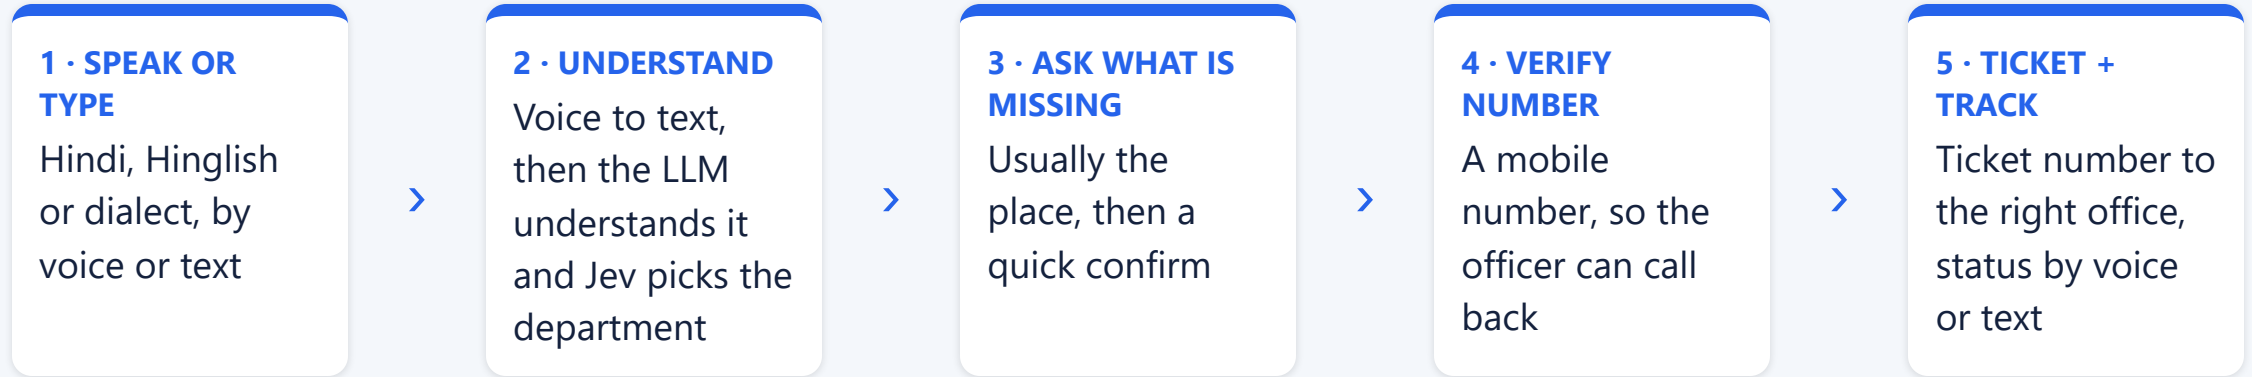

What we saw

The CM Helpline WhatsApp bot is a numbered menu of 7 options. Our Hinglish question got no answer, and it asked for the question again.

OUR SOLUTION

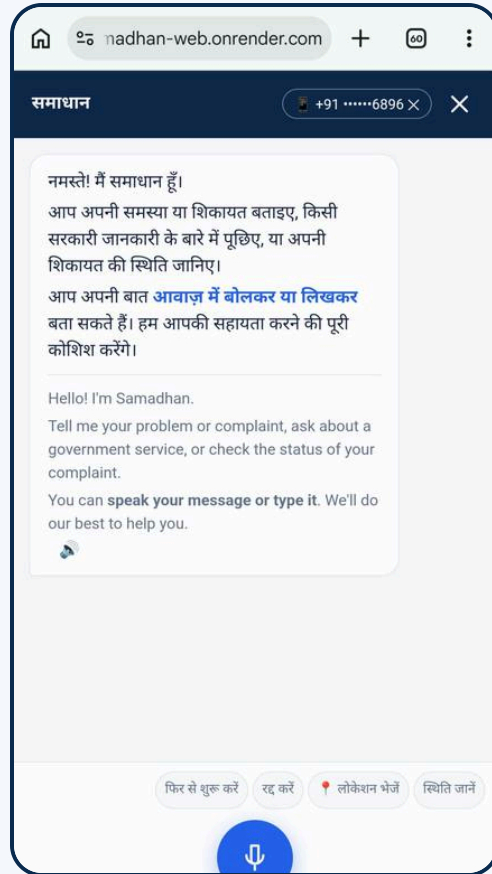

Just speak. We do the rest.

- No forms, and no need to know which office to go to.
- A **spoken reply** in the citizen's own language.
- Giving a mobile number before filing **discourages false complaints** and lets the officer call the citizen back.
- Officers get a ready, classified ticket on a **central dashboard**.

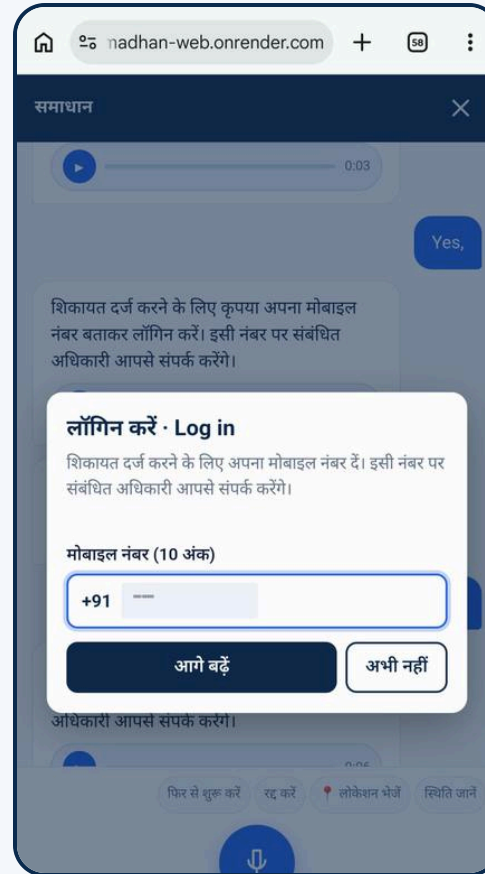

SEE IT WORK

From a spoken problem to a ticket, on a phone

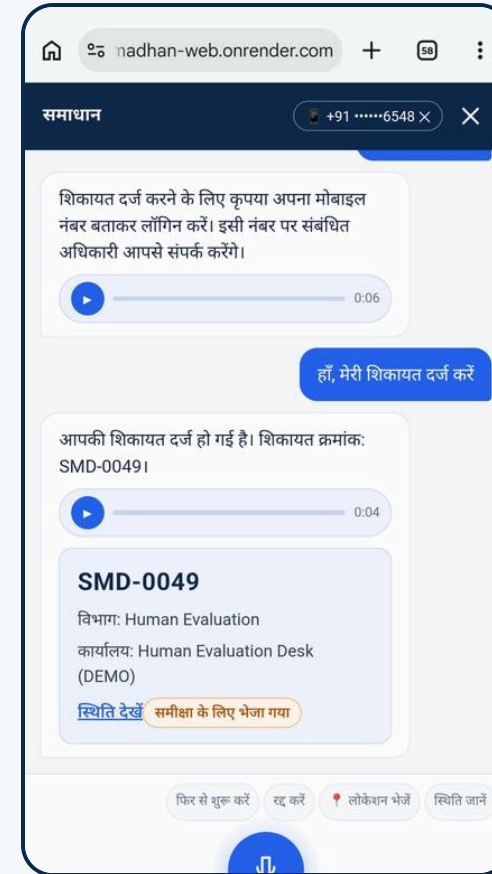

1 • Speak or type

Greeting, voice, location, status

2 • Verify the number

So officers can call back

3 • Ticket registered

The life of one complaint

An example (illustrative)

Citizen says: "mere mohalle mein 3 din se paani nahi aa raha"

Sarvam speech recognition turns the voice into text.

LLM and engine read the problem. **Jev**, our decision model, classifies it: water supply, so the water department.

Asks only what is missing: "Which ward or village?" Then a quick confirm and a mobile number.

Result: ticket SMD-xxxx at the right office, and a spoken reply with **Sarvam voice**.

The AI has a boundary

The model proposes. Plain code checks every value against a service specification, so it **cannot invent** a department, field or office.

Safe when unsure

Unclear cases go to a **Human Evaluation** desk. Every officer correction is logged.

Built to be reliable

Three Groq models then Gemini as fallback, short timeouts, no duplicate tickets.

Python · FastAPI · Supabase (Postgres + private audio storage) · HTML/JS website · Streamlit dashboard · Render

Built for how Madhya Pradesh speaks

Our main goal: language and dialect must never be a barrier between a citizen and the government.

Voice first, dialect friendly

Press-and-hold voice like a messaging app, Hindi first, spoken replies. Even complaint numbers are understood when said aloud.

Understand to route

We do not need perfect transcription of every dialect. **Jev**, our decision model, picks the department, the LLM extracts the details, and code checks both.

A new department is a file

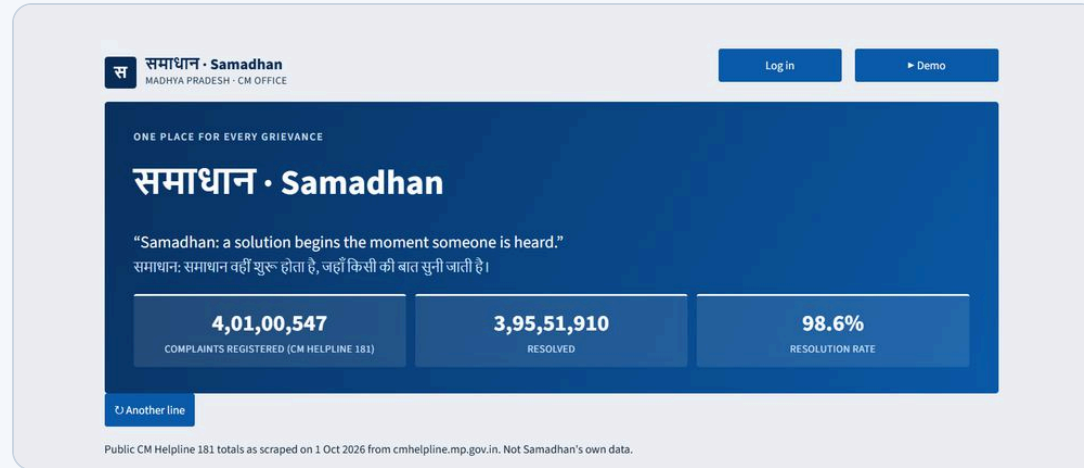

One specification file plus office rows. No engine rewrite, so it can grow across the state.

Data that Madhya Pradesh does not have yet

Voice → **words** → **department** → **officer correction** → a clean, labelled dialect dataset. The government is the legal authority, so only the government would hold it, and only to improve public services, for example to train future language models that talk to citizens like a real person.

THE OFFICER SIDE

One central dashboard for the CM office

Home: public CM Helpline 181 totals, labelled as not Samadhan's own data

Ready tickets

Department, office, summary and the original audio arrive together.

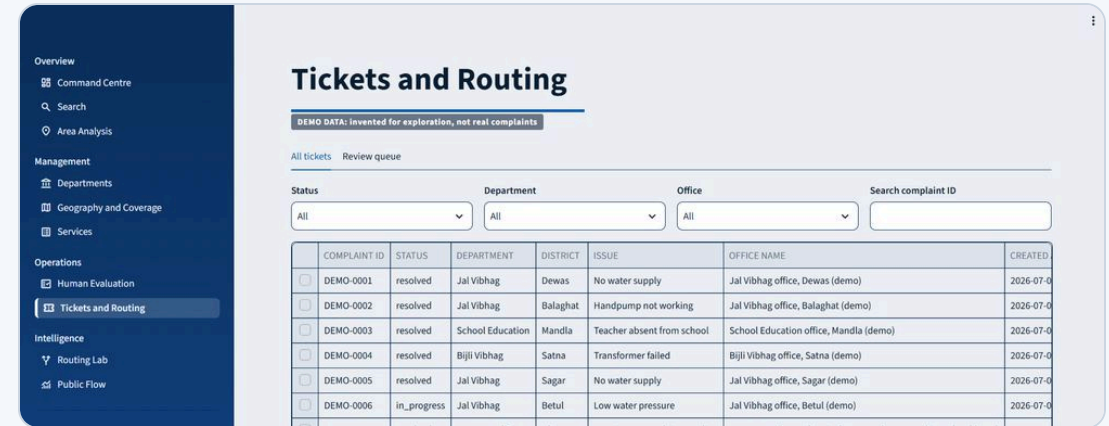

Human review

A review queue, reassignment across departments, and a log of every correction.

Area view

Search, area analysis and a map, so the CM office sees everything in one place.

Dashboard: samadhan-dashboard.onrender.com (tap Demo for sample data)

Tickets and routing: filters, review queue (invented demo data, labelled)

It works today, and we say what is not done

~90%

exact routing on 60 test messages (26 hand-written, 34 synthetic dialect)

450

automated tests pass (415 backend + 35 dashboard)

Live

website, backend and dashboard are hosted on the web

What we will measure in a pilot

- Fewer wrongly routed complaints (officer reassignments)
- Time from filing to the first status change
- Time officers spend on the review queue
- How many complaints are filed by voice

Our honest limits

- Office data is mostly DEMO. GPS ward matching is not built yet.
- Dialect test data is synthetic.
- Mobile login uses a demo PIN until we get the SMS licence.
- We claim no resolution-time gain yet.

ROADMAP

From one pilot to every district of Madhya Pradesh

NOW

Website, voice, routing, tickets, mobile login, central dashboard

NEXT

Verified office data, real SMS OTP once the licence is obtained, rate limits

THEN

WhatsApp and phone calls on the same engine, so people without a smartphone can use it

LATER

More departments and districts, officer accounts, hand-off to MPOnline channels

Data and consent

Calls and messages can be kept, with clear consent and rules, to build the dialect data MP needs. Consent text and a retention policy come before any public launch.

Fits what exists

Samadhan complements MPOnline's platform as a self-service channel. It does not replace it.

What we would like from the jury

Guidance on a pilot district, on data and consent rules, and on connecting with existing channels.

WHY WE DESERVE TO ADVANCE

A citizen who is heard trusts the system

A citizen who is heard trusts the system. A system that is trusted attracts business. And business builds the future of Madhya Pradesh.

We are a small team with very few resources, but we want to build something that truly matters, even if it is hard. Please give us the chance to advance, and with the jury's guidance, we will make Samadhan better.
