

Why Should Samadhan Be Selected

Samadhan (समाधान) · MPOnline Idea & Innovation Hackathon 2026 · Problem Statement 5

Every voice will be heard.

Many people in Madhya Pradesh have a real problem but cannot write it down or explain it to the right office. So their complaint is lost or it goes to the wrong desk. Samadhan is built for them.

With Samadhan, a person just speaks in Hindi, in Hinglish, or in their own dialect. Sarvam speech recognition turns the voice into text, our LLM and engine understand the problem and Jev classifies it and sends it to the right department. The person gets a ticket number and a reply spoken back in their own language with Sarvam voice. They can check the status any time, by voice or by text. There are no forms and they do not need to know which office to go to. It already works: routing is about 90% correct on 60 test messages, and 450 automated tests pass. The same engine can also sit behind WhatsApp and phone calls so people without a smartphone can use it too.

We also keep each conversation in a clean and organised way: the voice, the words, the department and any correction an officer makes. This is real conversation data from real people and MP has very little of it today. The government is the legal authority so only the government would hold this data and only to improve public services. In the future it can help train language models that talk to citizens like a real person.

A citizen who is heard trusts the system. A system that is trusted attracts business. And business builds the future of Madhya Pradesh. We are a small team with very few resources but we want to build something that truly matters even if it is hard. Please give us the chance to advance and with the jury's guidance, we will make Samadhan better.
